## Food That Nourishes. Farming That Heals.

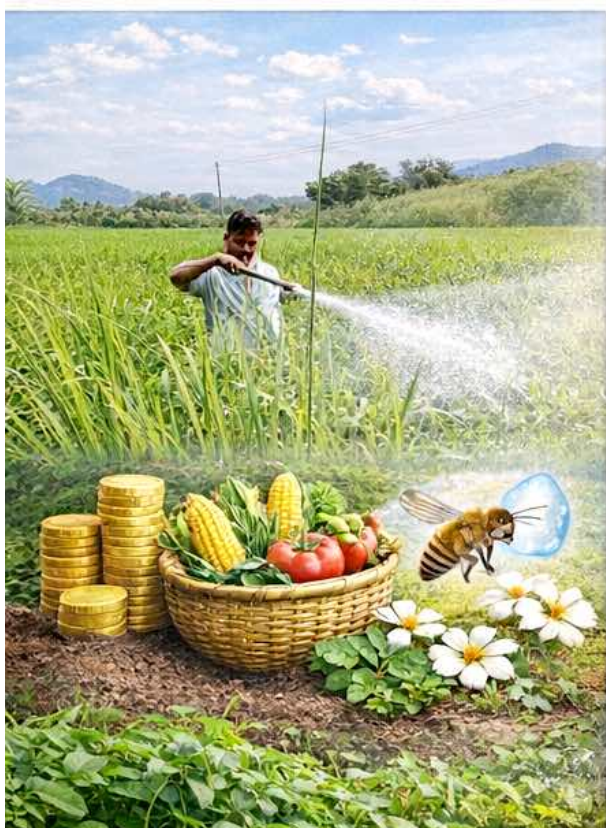

Systemic Farming bridges the goodness of natural farming with the efficiency of chemical nitrogen nutrition—without the use of harmful pesticides or insecticides. Built on soil nutrient regeneration • **plant defense priming** • and water quality enhancement, this approach is easy to adopt, simple to implement, and perfectly suited for large-scale commercial farming.

## Defense Priming

- ▶ Strengthens crops **from within** for natural protection
- ▶ Improves resistance to **diseases, pests, and climate stress**
- ▶ Seaweed-based **liquid fermented organic manure**
- ▶ Rich in **active plant hormones & bioactive compounds**
- ▶ Loaded with **beneficial microorganisms**
- ▶ Packed with **essential minerals**
- ▶ Enhances **soil nutrient uptake and plant efficiency**

## SYSTEMIC FARMING: THE FUTURE OF FARMING

### What Can You Expect from Systemic Farming?

- ✓ Reduces input costs by **up to 40%**
- ✓ Increases crop yield by **up to 20%**
- ✓ Improves both **quality and quantity** of produce
- ✓ **100% naturally processed** inputs
- ✓ **Targeted to host plants** – safe for pollinators and beneficial insects
- ✓ Supports sustainable farming practices
- ✓ Enables **nutrient-dense agricultural produce at an affordable price**

Manufactured in collaboration with:

# Boosting Paddy Cultivation Naturally!

Seaweed-Based Liquid Fermented Organic Manure  
Increase Yields, Enhance Immunity & Reduce Chemical Inputs

Boosts Immunity of Crops  
& Increases Nutrient Uptake from Soil

Yield More at Less Input

Reduces Need for Chemical Pesticides

Nutrient Rich Yield

Induces Resistance  
Against Pests & Diseases

100% Naturally Processed

Rich in Active Plant Hormones  
& Other Natural Nutrients

Developed in Collaboration

Eco-Friendly, Effective Solutions for Sustainable Farming

The Future of Farming...

# Systemic Integrated Farming

Lets do Conventional Farming in Organic way.

## Step 1

Make A Nutrient Reserve In The Soil Without Affecting The Soil Biodiversity

1. Green Manuring with tropical legume plants.  
Approx. 8 tons/acre dry Biomass.
2. Making Nutrient mix
  - i. Mix Urea/DAP/Complex with manure,
  - ii. Then mix TopCare [seaweed Biochar loaded with Waste decomposer and Essential Microorganism] with above mixture,
  - iii. sprinkle water and mix well,
  - iv. Leave it in the shade for not less than 5 days.

## Step 2

Stimulate Plants' Systemic Acquired Response With Aman Plant Activators

Enhanced Nutrient Uptake From The Soil  
Resistance Against Biotic & Abiotic Stress.

Does not affect Pollinators

Lets Grow Food as Medicine.

way

**Global Population Growth:** By 2050, the global population will reach 9 billion, posing a significant threat to food security.

**Increasing Demand for Nature-Based Farming:** Growing trends in organic farming, regenerative agriculture, and other sustainable practices require more farmland than conventional methods.

**Challenges with Hybrid Varieties:** While hybrid crops are designed for faster growth and higher yields, nature-based techniques struggle to meet their nutrient requirements.

**Need for Innovation:** There is a pressing need for innovative farming techniques to ensure pesticide-free food production while maintaining sustainability to feed the growing global population.

**GaiaNexus Private Limited**  
Food That Nourishes. Farming That Heals.

## Dual Defense & Growth Technology

### Bacillus subtilis + Seaweed-Based Plant Activator

A powerful combination of beneficial microbes and marine bioactives that delivers **double protection** and **enhanced crop growth**—naturally.

#### How It Works

- ➡ **Bacillus subtilis** forms a protective shield around roots and leaves
- ➡ **Seaweed bioactives** activate internal plant defense and growth systems
- ➡ Together, they **strengthen crops** from within for long-lasting protection & performance

#### Key Benefits

- 🛡️ **Double Protection**
  - Suppress harmful pathogens and disease-causing organisms
- 🌱 **Enhanced Growth & Yield**
  - Improves root development and nutrient absorption
- 🛡️ **Natural Defense Priming**
  - Activates plant's own defense mechanisms
  - Reduces dependency on chemical pesticides

#### What Makes It Superior

- ✓ Seaweed-based liquid fermented organic formulation
- ✓ Rich in natural plant hormones & bioactive compounds
- ✓ Loaded with beneficial microorganisms
- ✓ Packed with essential macro & micronutrients
- ✓ Improves soil health and plant nutrient uptake efficiency

#### Result You Can Expect

**Stronger crops. Healthier soils.**  
Nutrient-dense agricultural produce  
**at an affordable cost.**
